

Session Summary - March 24, 2026

Author(s): Michael Hale and GitHub Copilot (GPT-5.3-Codex)

Goal

Deploy the WordPress Archive app end-to-end and stabilize production behavior.

What We Accomplished

- Deployed backend API to Render as service: wp-archive-api-2.
- Connected backend to Render Postgres database wp_archive.
- Added SSL handling for external Render Postgres connections in backend.
- Seeded database with categories and 9 sample WordPress items.
- Deployed frontend to Vercel with API env var pointed at Render backend.
- Debugged and fixed frontend runtime crash caused by rating data type.
- Confirmed app renders successfully with items, categories, trending, and cards.

Production URLs

- Frontend: <https://wp-archive-fullstack-6z7piohw6-2242251mahmouds-projects.vercel.app/>
- Backend API root: <https://wp-archive-api-2.onrender.com/api>
- Backend health: <https://wp-archive-api-2.onrender.com/api/health>
- Items sample: <https://wp-archive-api-2.onrender.com/api/items?limit=5>

Key Fixes

1. SSL/TLS fix for Render Postgres external connections.
2. Frontend rating type fix in ItemCard component.
3. Frontend rating type fix in Sidebar trending component.

Commits Applied Today

- 5630a28 - fix: enable ssl for external render postgres connections
- 40820ef - fix: convert rating to number before calling toFixed
- 7f73ec2 - fix: convert rating to number in sidebar trending items

Current Status

- System is live and functioning.
- Main user flow is healthy.
- Data is visible in UI.

Tomorrow Starting Point

- Review what to improve first: portfolio launch, polish, or monitoring.
- Optional security step: rotate database password and redeploy backend with updated secret.
- Optional ops step: finalize smoke target URLs and run post-deploy smoke checks.
